

CONFERENCES

DNA Damage Responses and Cancer: Innovations from Radiobiology to Radiotherapy

EACR Conference in collaboration with ESTRO

DNA DAMAGE RESPONSES AND CANCER

Innovations from Radiobiology to Radiotherapy

Cambridge, UK
30 Mar - 01 April 2020

The European Association for Cancer Research (EACR) invites you to attend this small, focused conference on **DNA Damage Responses and Cancer 2020: Innovations from Radiobiology to Radiotherapy** in collaboration with the European Society for Radiotherapy and Oncology (ESTRO). The conference will be held at Churchill College, Cambridge, UK, from 30 March to 1 April 2020.

The conference will be relevant to participants from different fields of cancer research, including radiation biology, DNA damage responses, DNA repair, epigenetics, and cancer biology. We've created a programme that brings together basic scientists with translational and clinical researchers.

Hear talks from eminent researchers such as Steve Jackson (Gurdon Institute), Peter Glazer (Yale University), Verena Jendrossek (Universität Duisburg-Essen) and Fabrizio d'Adda di Fagagna (Institute of Molecular Oncology (IFOM), part of the Italian Institute for Cancer Research (FIRC)), and interact with the speakers and participants during the networking sessions.

Throughout the meeting, there will be great opportunities for young scientists to present their work, and the conference will have an open and engaging environment that aims to promote the exchange of knowledge and ideas.

With accommodation available onsite at the conference venue, there will be a friendly residential feel with an evening poster discussion session, drinks reception and panel discussion, as well as the optional conference dinner in the historic Churchill College dining hall.
